Certified Quality

Don't Just Take Our Word For it!

Our suppliers conform to strictly controlled and independently monitored Quality Management Systems such as ISO 9001, to ensure that everything is done correctly and according to best practise.

Our casement windows are independently tested by the British Standards institution to the following standards.

BS7412: Covers materials, construction, security, safety, weather tightness, operation and strength performance.

PAS24: Is the very stringent improved security test, where windows are tested to destruction to ensure they meet the requirements of enhanced security.

This means that periodically we have to send them to independent test houses to be tested to destruction. These are just some of the many standards that products in our vast product range conform to! Needless to say we take the quality of our products very seriously indeed.

Buyer Beware

To comply with Building Regulations your window and door installation will have to be registered with Building Control and meet strict requirements.

There are two main regulatory bodies, these are CERTASS and FENSA. These organisations carry out random site inspections to ensure that installations comply with current building regulations on things like; fire escape windows, energy efficient glass, use of toughened safety glass etc. You can check on their website to ensure that your chosen installer complies, needless to say we do!

Both CERTASS and FENSA have done a great job in raising industry standards,

but unfortunately there are still a lot of cowboys out there. Some glass companies have reported that as much as 30% of glass that they supply doesn't even meet the 2001 regulations for thermal efficiency, as unscrupulous installers look to cut costs. Buyer beware!

Your installation will be registered with CERTASS (www.certass.co.uk). Solicitors will nearly always ask to see a copy of this certificate if you sell your house, so make sure that you keep it safe.

Superior Energy Efficiency

The average window company stays in business for only 15 months. It's a shocking statistic in an industry full of cowboys. This has resulted in shoddy sales practices, products that don't even meet minimum compliance standards and substandard products made from the lowest price components.

Exceptional performance:
that's good news for the planet and for your pocket.

Turn your home into a lean green energy-saving machine, by installing our PVCu windows and doors. We can help to reduce your carbon footprint and your energy bills in lots of clever ways.

Our product range features multi chambered profiles and we can offer you the most advanced glass available. For the ultimate energy savings, why not opt for our Triple Glazed windows.

Top Environmental Credentials

Our products come top of the class when it comes to environmental credentials. They have been awarded an energy rating of up to A for maximum thermal efficiency.

CE Marking

As from July 2013, windows and doors have to meet the requirements of CE Marking. It is against the law to not comply.

Thermal Ratings

By law your windows and doors have to meet strict thermal performance regulations. Rest assured that our products exceed all current requirements.

All under one roof

We control the manufacturing process of all our products, from the start in our state of the art factory - to the end, beautifully installed in your home.

Components

We refuse to compromise on top quality

Our windows are made from British Made, high quality Marinespec™ components, with up to 25 years anti corrosion.

They are built specifically for coastal environments to give you worry free performance beyond your guarantee. We believe spending more on components is worth every penny, most of our competitors cut cost and use inferior materials.

Conservatories

Choosing the perfect conservatory to extend your home can be a daunting task; we're here to guide you through the process to ensure that you end up with the best result. Our innovative products will give you the best long term return on your investment and enable you to use your conservatory all year round.

Our choice of traditional and contemporary designs and our range of colours, finishes and styles is simply second to none. If you need advice, just ask. Our consultants will be delighted to create a design sympathetic to your property, your living requirements and, of course, budget.

We've worked hard on product development to expand the choices available to you. Recent innovations include: A choice of 10 different colours, such as Chartwell Green, Cream and Rustic Cherry.

Roof options with significantly improved heat reflection and thermal insulation, insulated tiled roof conservatories and self cleaning roof glass. Heating options include air conditioning and underfloor heating. You can even opt for bi-fold doors stretching the entire front of the conservatory.

Our conservatories have been designed to withstand extreme weather and are independently performance tested. To put it simply, for your peace of mind our conservatories are built to last.

FIND OUT MORE ABOUT OUR HUGE RANGE OF CONSERVATORIES AT WWW.LAUNA.CO.UK

Things to consider...

A Conservatory is one of the most cost-effective and flexible ways to extend your home, a well designed conservatory can quite simply transform the way you live.

1. Usage

What do you want to use your conservatory for?

2. Budget

It's important that you have an idea of budget so that we can design your conservatory to give you best value for money. Our pricing is fair and honest, so if your budget allows we can design you something really special.

3. Size

Don't skimp on size, that extra few metres doesn't cost much more and will give you a more usable space.

4. Positioning

The orientation of your conservatory will determine the most appropriate roof material and ventilation. Our advisors will be happy to give you advice on this.

5. Style

By visiting your home we can make an assessment of site limitations, provide solutions and help you through the process of choosing the most suitable style for you and your home.

6. Materials

It's vital that you choose the right roof materials and the right side frame glass to give you maximum enjoyment throughout the year.

7. Planning permission

Planning laws have recently been relaxed, which means that in most cases you have more freedom to choose what you want. Make sure you make us aware of local planning restrictions and any local knowledge you have on ground conditions etc. If in doubt it's better to be safe than sorry and seek advice.

8. Cavity trays

Adding a conservatory effectively makes your outside wall an internal one. Opt for a cavity tray to prevent damp from above seeping through brickwork or render and entering the conservatory.

All of our products are made bespoke for you, our skilled advisors can help you to design your perfect Conservatory

Popular Styles

Most conservatories are made up of four main styles, Lean To, Victorian, Edwardian and Gable End.

Victorian Conservatories

Victorian conservatories offer a traditional look; they tend to have three or five facets to the front elevation, and ornate detailing along the ridge of the apex roof. Be careful though the shaped front will limit your usable space compared to a squarer style.

Edwardian or Georgian Conservatories

This is by far the most popular style, the square shape will give you maximum internal space and versatility when positioning doors etc. The vaulted roof gives you a real sense of space. A popular option is to build the walls higher on one side, with a row of windows on top to provide wall space to hang a TV and to give privacy from neighbours.

Gable Conservatories

This style features a flat Gable frame to the front elevation, which gives you the opportunity to make a real statement with an attractive bespoke design. This design is perfect if you opt for blinds as all of the roof glass units are rectangular in shape; fitting blinds to Edwardian and Victorian Conservatories can be complicated and expensive.

Lean To Conservatories

The Lean to is still incredibly popular, it's simplicity makes this the lowest cost option. This style is available with a 2.5 degree pitch which makes it ideal if you have height restrictions. It is also widely used where there are adjoining walls.

Something Different...

The above styles can be combined to form P and T and L shaped conservatories, this is especially popular with larger designs. Hips, valleys and box gutters can be used to design your perfect solution. The Gable, Victorian and Edwardian styles can also be hipped at the back should you need to reduce the height to avoid windows, low guttering, plumbing etc.

Bespoke From Start To Finish

All of our products are made bespoke for you, our skilled advisors can help you to design your perfect Conservatory

Something Special

Because you deserve the best!

We have the expertise and product range to design you a truly bespoke conservatory. Lantern roofs, Orangeries, tiled roof conservatories and bi-fold doors are all the rage at the moment and will give you a real wow factor. Dare to be different!

Life in fabulous colour

Add warmth and style to your home with our range of coloured conservatories. Coloured frames and roofs offer an authentic alternative to timber, but without the associated problems of high maintenance and of course cost. All of our woodgrain finishes are also available in white on the inside.

Golden Oak Cherrywood Rustic Cherry Woodgrain White Cream Chartwell Green Grey Green Black/Brown

The colours shown are designed as a guide. Before making your final decision, please ensure you have seen a colour swatch.

Tiled Roofs - Use your conservatory every day of the year

The biggest complaint with conservatories is that they are too hot in the summer and too cold in the winter.

The latest innovation is tiled roof conservatories, which come fully insulated to meet modern building regulations, but are a fraction of the cost of a typical extension.

In order to reduce weight our roofs feature a range of synthetic tiles designed to match the appearance of natural slate, clay and concrete tiles, even the ridge cappings look authentic. The

roof will also be fully insulated to provide you with U values as low as 0.18, which will help to regulate room temperature all year round. The insulated roof space is underboarded with plasterboard and skimmed ready for a paint finish, this also gives you the opportunity to have low energy downlights fitted. They are available in a wide range of styles and are made bespoke to your size and design.

Lantern Roofs

Stylish and innovative

We normally supply Lantern Roofs for customers that have existing flat roof areas or where they are having extensions built. The Lantern design will flood light into your living space, whilst regulating the temperature to ensure that you have a year round usable space.

Orangeries

Elegance and style all year round

Our patented designs enable us to provide you with your dream Orangery at a fraction of the cost of a 'traditional build'.

One thing is for sure, whatever style you go for, you will be creating a stunning and practical living area. The features, styles and colours available mean that you really can make a truly stunning addition to your home.

An Orangery will give your home the wow factor and make your friends and neighbours green with envy. Our customers have told us that they have been absolutely delighted with the end result.

Web: www.launa.co.uk

What are the main differences between a standard conservatory and an Orangery?

(You can pick and choose from our choice of options)

- A deep eaves beam, which raises the height of the roof, to increase the feeling of grandeur.
- Deep, raised aluminium cornicing/fascia, which gives a real feel of presence.
- Reeded regency pilasters.
- A stepped internal ledge, (plaster boarded and skimmed which can be fitted with downlights or audio speakers).

This style is also available with Bi-folding doors and vertical sliding windows.

Decorative detailing

Internal pelmet pods create a stunning appearance for plastering, prior to the fitting of downlighters or audio speakers. With a choice of 'raised line' or 'low line' solutions for internal aesthetics.

Raised line

Low line

Pelmet Pod

Mullion Pod

Perfect Porches

Add style and extra living space

Our porches are fabricated to the same high standards and specifications as our conservatories, windows and doors.

We go the extra mile to make sure that every porch installation is carried out by skilled craftsmen to exceed your expectations.

Secure your porch

Secure your porch with our range of stylish doors, strengthened with multi point locking systems for maximum security.

Bespoke design

Customise your porch with a choice of styles, colours and finishes to give you the best overall result. Our advisors can give you sound advice to help you to get the most out of your porch area.

Glazing options

Choose a glass roof for maximum light, a tiled roof for maximum thermal efficiency or a polycarbonate roof for a cost effective alternative.

Roof Trim/Fascias

A smart appearance and great protection

Replace old timber boards and complete your fascia installation project with a professional finish.

Choose from a selection of colours including white, black and brown, designed to compliment our window and door range. Get peace of mind knowing that our expert installers use the highest quality materials, to give you a first class job.

Aluminium

Slim, attractive, durable and extremely versatile

We manufacture quality aluminium windows and doors in our own bespoke state of the art factory.

Modern aluminium is attractive and thermally efficient; sophisticated thermal breaks within the profile eliminate cold bridging and help avoid condensation.

The Architects choice

Aluminium offers you choice and unsurpassed quality, whether you want to match slim historical steel windows or create an architect designed masterpiece. We offer an unlimited range of colours in a variety of finishes and a choice of over 85,000 components, aluminium is perfect for that special project.

Please Note:

Every aluminium project is designed and priced bespoke for you. The large range of options means that you may have to wait up to a week for your quotation to be prepared. We think it's important to ensure that we give you a fair and accurate price that meets your exact requirements.

www.launa.co.uk

Glass Options

There are literally thousands of different glass specifications to choose from; whether you are looking for enhanced thermal efficiency, security, sound insulation, privacy, fire resistance, heat or glare reduction etc.

Our product development team has put a lot of time into researching the most innovative solutions available and our advisors have been trained to give you sound advice.

Not only will we advise you on the best glazing solution, but with us you can be sure that you also get what you have paid for.

One of the largest sealed unit manufacturers in the UK recently told us that 30% of all glass ordered with them doesn't even meet 2001 Building Regulations requirements.

It is a statement of fact that lots of companies sell 'A' rated energy efficient windows but only supply the customer with 'E' rated cheaper

equivalents; this is also widely reported with customers being sold expensive conservatory roof glass, only to be given basic specification, standard glass.

Acoustic performance

We offer a range of solutions to reduce noise depending on your specific requirements. Noise is typically measured with Decibel Ratings (DB). Ask your sales advisor for a comparison chart.

Security

Toughened glass can be a cost effective way to enhance security. Laminated glass is even stronger, but is more costly.

Safety

Toughened glass is stronger and safer than normal glass. When it breaks it shatters into tiny fragments as opposed to dangerous shards

of glass. We fit toughened glass as standard on all doors and windows below 800mm from floor height.

Thermal performance

We can offer you 'A' rated and triple glazed windows, featuring the most technically superior glass available today, with U Values as low as 0.8.

Self cleaning glass - how does it work?

Self cleaning glass, has a titanium dioxide coating, which makes the glass very flat, this makes it harder for dirt to stick and causes water to sheet down and clean the glass. UV filters integrated within the surface coating, break down organic dirt such as bird droppings which enables it to be washed away (hydrophilic action).

Sun reflection/Heat retention

Various coatings can be added to the glass to reflect direct sunlight, reduce glare and retain valuable heat, this is very popular with conservatory roofs. There are numerous options depending on your budget and requirements.

Security

We take the security of your home very seriously

We would rather over engineer our products than risk your home being broken into. From start to finish our product development process is geared towards giving you the very best. We use the best quality locks, the correct reinforcement and the right components to make sure that you can relax safe in the knowledge that your house is safe and secure.

For added security be sure to ask your adviser about security upgrades

such as laminate glass, enhanced security cylinders and heavy duty door handles. We have the expertise to give you the right balance between cost and performance to increase security in high risk areas.

Our key locking feature is also made with an anti-bump, anti-pick, anti-drill, anti-snap and anti-extraction promise and is trusted by many insurance companies.

Checklist

- ✓ Local business that really cares about its customers, for your peace of mind
- ✓ State of the art manufacturing, to ensure the best quality products, at competitive prices
- ✓ Highly skilled expert installers that take pride in their work, to give you the best end result
- ✓ Independently tested products, for long term performance and guarantee
- ✓ Industry leading energy efficient products, to save you money on your heating bills
- ✓ Local sales advisors - ready to offer helpful expert knowledge
- ✓ Marinespec™, anti corrosion components sourced from the UK, for maximum long term durability
